

Informed Consent for Excision of Submandibular Gland

Introduction

This information is given to you so that you can make an informed decision about having an excision of a submandibular gland. Take as much time as you wish to read this information and ask questions of your doctor or the assistants. You have the right to ask questions about and understand the surgery as well as you can before deciding to have the surgery. After learning of your condition and your options for treatment, you and your doctor are the ones who decide together if and when you should have this operation based on your needs and medical condition. This surgery is not an emergency. You may decide not to have this operation at all.

Nature of the Condition and Treatment

Except in unusual circumstances, removing a submandibular gland is appropriate when you have a mass or stone in the gland, or chronic infection. If you choose to have an excision of the submandibular gland, it is important to understand that the submandibular gland will be permanently removed.

1. **Complications of Surgery in General:** As with all types of surgery, the possibility of other complications exists due to anesthesia, drug reactions or other factors which may involve other parts of my body, including a possibility of brain damage or even death. The likelihood of these complications is very low. The benefits of removing a tumor or stone, diagnosing a possible cancer, or removing a source of chronic infection are significantly greater than the possibility of a complication noted below.
2. **Specific Complications of Excision of Submandibular Gland:** Risks of excision of submandibular gland include damage to the marginal mandibular nerve causing temporary or permanent weakness of the corner of the mouth with risk of drooling and asymmetry of frown and smile, damage to the lingual nerve causing loss of taste and sensation in the anterior 2/3 of that side of the tongue, damage to the hypoglossal nerve causing paralysis of that side of the tongue, numbness, fluid collection needing drainage, incomplete excision of gland or tumor, retained stone in duct causing infection, and need for further procedures.

Alternative Methods of Treatment for Mass or Infection in Submandibular Gland

Alternative treatments for mass in the submandibular gland are needle biopsy and observation. Alternative treatment for a stone in the duct of the gland is direct excision

of the stone through the floor of the mouth. Alternative treatment for chronic infection of the submandibular gland is antibiotics as necessary.

Patient Statement and Consent for Operation

I hereby authorize _____, and any associates or assistants of his choice to perform upon me excision of submandibular gland.

I recognize that during the course of the procedure, unforeseen conditions may necessitate additional or different procedures than those explained. I, therefore, further authorize and request my doctor and any associates or assistants of his choice perform such as are, in their professional judgment, necessary or appropriate for such procedures.

I understand that the proposed care may involve risks and possibilities of complications, and that certain complications have been known to follow the procedure to which I am consenting even when the utmost care, judgment and skill are used. I acknowledge that no guarantees have been made to me as to the results of the procedure, nor are there any guarantees against unfavorable results.

I accept the risks of substantial and serious harm, if any, in hopes of obtaining desired beneficial results of such care and acknowledge that the physicians involved have explained my condition, the proposed health care, and alternative forms of treatment in a satisfactory manner.

The basic procedures of the proposed surgery, the advantages, disadvantages, risks, possible complications, and alternative treatments have been explained and discussed with me by my doctor. Although it is impossible for the doctor to inform me of every possible complication that may occur, the doctor has answered all my questions to my satisfaction. In signing this consent form, I am stating I have read this form (or it has been read to me), and I fully understand it and the possible risks, complications and benefits that can result from the surgery. I also acknowledge that the doctor has addressed all of my concerns regarding this surgery.

Patient's Name: _____ Age _____

Patient's Signature: _____

Date: _____ Time: _____ Place: _____

Witness' Signature: _____

Doctor's Signature: _____

As parent, guardian, caretaker, next of kin or other legal representative responsible for the patient whose name appears above on the appropriate patient signature line, I have read this document and, to the limit of the patient's understanding, I have discussed this

informed consent and its terms with the patient. Due to the patient's inability to sign this informed consent, I agree, on behalf of the patient, to sign for the patient and bind him/her to the terms of this informed consent.

Name: (printed)_____

Signature:_____

City:_____ State:_____ Zip:_____

Relationship to Patient:_____

Date:_____ Time:_____ Place:_____

I have received a copy of this informed consent for my own records. I have had the opportunity to read this informed consent and my questions regarding the surgery, alternatives, risks, and expected outcomes have been answered.
